

Shashika Nisansala Kumari Kulasekara

HNDIT Undergraduate - Mobile App Developer (Flutter)

Phone: +94 75 927 6697

Email: sashikanisansala845@gmail.com

GitHub: github.com/shashikaNis

PROFILE

HNDIT undergraduate at SLIATE, expected to complete in 2027, with hands-on experience building and shipping a Flutter (Dart) mobile app end to end - from Figma UI specs through implementation, REST API integration, and manual testing - all self-directed and independently, which translates directly to working well in a remote team setting. Also comfortable with native Android (Java/Kotlin), Firebase, and Git-based version control from two further projects, one delivered solo and one within a 10-person team. Detail-oriented, quick to pick up new tools, and eager to contribute to real client work. Academic coursework is complete; now seeking a paid internship for mandatory industrial training.

EDUCATION

Higher National Diploma in Information Technology (HNDIT1052)

Sri Lanka Institute of Advanced Technological Education (SLIATE), ATI-Anuradhapura - Department of Information Technology

Registration No: ANU/IT/2023/F/23 | Registered: August 2024 | Expected Completion: 2027

Status: Academic coursework completed; currently seeking a placement for mandatory industrial training

KEY PROJECTS

Fuel Station Management System - Personal Full-Stack Project

- Architected and independently built a full-stack, inventory-linked fuel reservation platform end to end, designing validation logic so a token only issues when the requested volume is actually reserved in a station's tank - closing off an overbooking edge case.
- Designed the web and mobile interfaces in Figma - the vehicle owner web flow (stock map, pre-booking) and the station manager / pump attendant mobile flow - before building them out.
- Built a Flutter (Dart) mobile app for station managers/pump attendants (on-device OCR for license plates) alongside a React/Next.js web app for vehicle owners.
- Integrated the Flutter app with the NestJS REST API and Google Cloud Firestore for real-time stock streaming, so pump attendants always see live tank levels.
- Built the NestJS/TypeORM/MySQL backend behind both clients (Auth, Vehicle, Station, Reservation logic, JWT/bcrypt security, Dockerized deployment); used Git/GitHub throughout.

Technologies: Flutter (Dart), Figma, REST APIs, Google Cloud Firestore, Google Maps API, NestJS, TypeORM, MySQL, React, Next.js, HTML, CSS, Docker, Git

Stay Safe Route (SSR) - Individual ICT Project, HNDIT1052

- Designed the app's screens and user flow in Figma before development, covering child-device pairing, live map tracking, and parent-side alerts.
- Designed and built two interconnected Android apps - the SSR Beacon app (child device) and a Parent app - delivering real-time GPS tracking, safe-route deviation alerts, and multi-child profile support.
- Implemented a battery-optimized foreground location service (FusedLocationProviderClient) and integrated the Google Maps SDK to display live location and predefined safe routes.
- Built secure Firebase-based authentication and real-time data sync (Firestore, Cloud Messaging, Cloud Functions); individually carried the project from requirements through implementation and manual testing.

Technologies: Figma, Java, XML, Android Studio, Firebase, Google Maps API, Git

Expire Guard - Group Project (Team of 10)

- Contributed as a developer on the Android client and Firebase Cloud Functions backend for an app tracking household product expiry dates.
- Built Android screens (Kotlin, View Binding) for registration/login, product add/edit, and a home list view, backed by Firebase Authentication and Firestore.
- Developed scheduled Firebase Cloud Functions (TypeScript) that run three times daily to check each user's products expiring within a week and send personalized push notifications via FCM based on their notification-time preferences.

Technologies: Kotlin, Android (View Binding), Firebase (Authentication, Firestore, Cloud Messaging, Cloud Functions), TypeScript, Node.js, Git

TECHNICAL SKILLS

Mobile Development: Flutter (Dart), Android (Java, Kotlin, View Binding), FusedLocationProviderClient, Google Maps SDK

Backend and Cloud: Firebase (Authentication, Firestore, Cloud Messaging, Cloud Functions), Google Cloud Firestore, RESTful APIs, JSON, Node.js, NestJS, MySQL, JWT Authentication

Languages: Dart, JavaScript, TypeScript, Java, Kotlin, HTML, CSS, XML, SQL

Frameworks and Libraries: Flutter, React, Next.js, NestJS, TypeORM

Tools: Figma, Git and GitHub, Android Studio, Docker
